JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Programs for health campaigns.—The many schools which are at present engaging in health campaigns will find some very helpful material in a recent booklet¹ written by teachers in the New York City schools. The stimulus for writing the plays contained therein was supplied by a "Milk and Child Health Campaign" which was held under the auspices of the Child Health Organization of America. The plays were written and presented by various schools in a contest for the most graphic presentation of the value of milk.

The pamphlet contains fifteen short plays suitable for elementary-school children. The materials and settings are simple and could be provided in any school. Most of the plays require little in the way of preparation; a few are more elaborate. They all exhibit the tendency to teach health in the most vivid and amusing way. The book should not only prove of value in itself but also stimulate many other productions of the same type.
